

Nader Rahoumah

.NET DEVELOPER

Cairo, Egypt • +201129848979 • naderrahoumah@gmail.com • [LinkedIn](#) • [GitHub](#)

SUMMARY

.NET Developer proficient in ASP.NET Core, C#, and Entity Framework Core. Dedicated to providing scalable backend solutions and playing a role in innovative projects. Skilled in tackling complex issues and committed to delivering high-quality software development.

EDUCATION

Bachelor's Degree in Computer Science

2021-2025

Graduation Project | *Grade: Excellent.*

📍 Al-Shorouk academy , CS Department.

Skills & abilities

- Programming Languages: C#, Python, SQL, C++, HTML .
- Frameworks & Libraries: ASP.NET Core, Entity Framework Core, ASP.NET Core MVC, Bootstrap.
- Database Management: SQL Server, LINQ, Database Design.
- API Development: RESTful APIs, Swagger, JWT Authentication, Auto Mapper.
- Design Patterns & Principles: Repository Pattern, Specification Pattern, Dependency Injection, SOLID Principles.
- Tools & Technologies: Git & GitHub, Postman, Visual Studio.
- Other Skills: Problem Solving, Data Structures & Algorithms, Agile Methodology, Unit Testing.
- Soft Skills: Team Collaboration, Communication, Attention to Detail, Continuous Learning.

Experience

Coatch Academy & Problem Solving Training

01/2024 – 03/2024

Learning core problem solving concepts and programming fundamentals using c++ applied algorithms and logical thinking techniques through coding exercises

Route Academy| ASP.NET Core Diploma

04/2024 – 10/2024

Covered key backend development topics, including C# fundamentals, Object-Oriented Programming (OOP) and SOLID principles, Design Patterns, LINQ and Entity Framework Core, ASP.NET Core MVC and ASP.NET Core APIs.

Projects

Pharmacy Management System

[Link](#)

Architected and implemented a pharmacy operations platform that streamlines the complete business lifecycle of a pharmacy. Users authenticate through a secure JWT-based identity system, manage medicines and suppliers, execute purchasing workflows that increase inventory and track supplier liabilities, process customer sales with stock validation rules, handle purchase and sales returns, record supplier payments, and maintain inventory consistency through automated stock transaction tracking. The solution follows Clean Architecture principles with a layered design, leveraging ASP.NET Core, Entity Framework Core, SQL Server, Repository Pattern, and Specification Pattern to ensure scalability, maintainability, and separation of concerns.Talabat Clone APIs System.

Talabat Clone APIs System

[Link](#)

Architected and developed a scalable e-commerce backend that handles the complete order lifecycle from product browsing to payment confirmation. Implemented product catalog management with advanced querying capabilities, Redis-based basket management, address and order workflows, payment processing integration with Stripe, and secure authentication and authorization mechanisms. Applied Repository Pattern, Specification Pattern, and Unit of Work to build reusable and maintainable business logic while leveraging ASP.NET Core, Entity Framework Core, SQL Server, and Redis to deliver a high-performance RESTful API.

HogwartsChat Mvc

[Link](#)

Hogwarts Chat (*ASP.NET Core 8, SignalR*): A real-time communication platform utilizing WebSockets for instant messaging. Features dynamic SignalR group isolation for private chat rooms, live presence tracking, and robust authentication (Identity) with secure multimedia file-sharing capabilities.

ProEstate Mvc

[Link](#)

ProEstate: A robust ASP.NET Core 8 MVC backend system featuring complex hierarchical database relationships, a dynamic date-based status engine, and secure transactional workflows for real estate management using EF Core and SQL Server.

Car Showroom Management System | C# Console Application

[Link](#)

Designed and developed a console-based vehicle management system that simulates real-world showroom operations. Implemented core OOP concepts including inheritance, polymorphism, encapsulation, and abstraction through a hierarchy of vehicle types. Built features for inventory management, vehicle search, price updates, sales tracking, and analytical reporting. Utilized collections, exception handling, and modular class design to ensure maintainability and scalability.
